

Domain model for the yacht club “The happy pirate”

By Ola Franzén of222au

In the course 1DV607, Workshop 1, Grade 2

Some notes:

- For the assignment of berths:
This is initially done by the secretary. If two members wish to switch births between each other, they should contact the secretary which then makes the change official.
- About the calendar; I have left out association of viewing/listing calendar events to the member/secretary to not clutter too much and since that association information is not something that needs to be remembered/stored.
- About the User->UserRole; I leave the multiplication of the association out for the developers later on to decide about in the actual system (if a single User can have more than one UserRole or not).
